What is SARE?
Since 1988, the Sustainable Agriculture Research & Education (SARE) program has been the go-to USDA grants and outreach program for farmers, ranchers, researchers and educators who want to develop innovations that improve farm profitability, protect water and land, and revitalize communities. To date, SARE has awarded over $404 million to more than 8,776 initiatives.

SARE is grassroots with far-reaching impact
Four regional councils of expert practitioners set priorities and make grants in every state and island protectorate.

SARE communicates results
SARE shares project results by requiring grantees to conduct outreach and grower engagement; and by maintaining an online library of practical publications, grantee-produced information products and other educational materials.

SARE: Advancing the Frontier of Sustainable Agriculture in...

Alaska

Project Highlight: Appropriate Technology and Cooperative Marketing to Increase Root Crop Production on Alaska’s Kenai Peninsula

The Kenai Peninsula is the fastest-growing agricultural region in Alaska, with the number of farms increasing at nearly three times the rate of the rest of the state. But most of those farms are small – less than five acres – and selling direct to consumers at farmers markets or to local restaurants.

The Kenai Soil and Water Conservation District commissioned a study, completed in early 2017, that found for growers there to expand their distribution, they need to increase their production and look at coordinating marketing and distribution. The study also looked at potential cash crops. Potatoes were one of the crops identified.

The problem for small growers, however, isn’t how well potatoes grow. It’s how much work they are to harvest when you’re digging them up by hand with a pitchfork.

So, as a first step to expanding production and exploring cooperative marketing and distribution on the Kenai, the conservation district tested – and now rents out – a single-row potato digger and tub washer at a very reasonable rate.

It’s already paying off for the Alaskan farmers, where labor is always in short supply. One grower reduced his harvest and processing time from seven days to less than two. There is a four- to six-week window for harvest that allow the region’s growers to share the single machine.

For more information on this project, see sare.org/projects, and search for project number OW18-029.

SARE in Alaska
western.sare.org/state-profiles/alaska/

$1,297,083 in total funding
38 grant projects
(since 1988)

For a complete list of grant projects state by state, go to www.sare.org/state-summaries
SARE in Alaska

Grants awarded
2019–2024

Total awards: **6 grants**
- 4 Farmer/Rancher
- 1 Research and Education
- 1 Professional Development Program

Total funding: **$262,043**
- $87,168 Farmer/Rancher
- $75,000 Research and Education
- $99,875 Professional Development Program

Find a complete list of projects on page 3.

Farmer and rancher impacts
2019–2024

SARE grantees have reported the following impacts from their projects:

- **1,068 farmers participated in a SARE-funded project**
- **77 farmers reported a change in knowledge, awareness, skills or attitude**
- **16 farmers changed a practice**

Find a complete list of projects on page 3.

For detailed information on SARE projects, go to www.SARE.org

SARE is funded by the USDA’s National Institute of Food and Agriculture (NIFA).

This report includes summaries of competitive grant programs only. Some competitive grant programs that are no longer offered may be included or excluded from the totals in this report depending on the grant program and SARE region.
Alaska has been awarded $1,090,833 grants to support 33 projects, including but not limited to, 4 research and/or education projects, 3 professional development projects and 18 producer-led projects. Alaska has also received additional SARE support through multi-state projects.
