What is SARE?

Since 1988, the Sustainable Agriculture Research & Education (SARE) program has been the go-to USDA grants and outreach program for farmers, ranchers, researchers and educators who want to develop innovations that improve farm profitability, protect water and land, and revitalize communities. To date, SARE has awarded over $359 million to more than 8,107 initiatives.

SARE is grassroots with far-reaching impact

Four regional councils of expert practitioners set priorities and make grants in every state and island protectorate.

SARE communicates results

SARE shares project results by requiring grantees to conduct outreach and grower engagement; and by maintaining an online library of practical publications, grantee-produced information products and other educational materials.

Colorado

Project Highlight: Dryland Cropping Intensification Shows Benefits

In the Great Plains region of Colorado, a scarce supply of water is the chief limiting factor in dryland cropping yields. This concern over limited water availability prompts many farmers in the area to adopt a winter wheat-fallow rotation, yet this approach worsens soil productivity over the long term.

Intensifying production and using no-till could actually improve yields and profitability by building up soil health and improving moisture retention. Using a SARE grant, Colorado State University graduate student Steven Rosenzweig set out to both quantify the benefits of reducing fallow frequency and understand the barriers to adoption. He compared different dryland rotation intensities and found that reducing fallow improved soil health, which ultimately allowed farmers to improve grain production with a similar amount of fertilizer.

He also conducted in-depth interviews with 30 farmers, and identified risk, profitability and crop insurance policy as top perceived barriers to reducing fallow frequency. He also identified strategies for helping farmers overcome the barriers, such as changing the way agronomic researchers approach their work to be more inclusive of long-term viewpoints and profitability. The identified benefits, barriers and strategies for change were widely disseminated, including a website, blog and an upcoming film.

For more information on this project, see sare.org/projects, and search for project number GW16-020.
SARE Grants in Colorado

Total awards: **110 grants**
- 19 Research and Education
- 24 Professional Development Program
- 54 Farmer/Rancher
- 6 Graduate Student
- 7 On Farm Research/Partnership

Total funding: **$5,644,451**

- **$3,117,090** Research and Education
- **$1,471,913** Professional Development Program
- **$550,895** Farmer/Rancher
- **$153,477** Graduate Student
- **$351,076** On Farm Research/Partnership

Find a complete list of projects on page 3.

SARE's Impact

- **53 percent** of producers report using a new production technique after reading a SARE publication.
- **79 percent** of producers said they improved soil quality through their SARE project.
- **64 percent** of producers said their SARE project helped them achieve higher sales.

Learn about local impacts at: [western.sare.org/sare-in-your-state/colorado](western.sare.org/sare-in-your-state/colorado)

Contact Your SARE State Coordinator

SARE sustainable ag coordinators run state-level educational programs for Extension and other ag professionals, and many help grant applicants and recipients with planning and outreach. Visit [western.sare.org/state-pages/colorado](western.sare.org/state-pages/colorado) to learn more.

For detailed information on SARE projects, go to [www.SARE.org](www.SARE.org)

SARE is funded by the USDA’s National Institute of Food and Agriculture (NIFA).

This report includes summaries of competitive grant programs only. Some competitive grant programs that are no longer offered may be included or excluded from the totals in this report depending on the grant program and SARE region.
Colorado has been awarded $5,644,451 grants to support 110 projects, including but not limited to, 19 research and/or education projects, 24 professional development projects and 54 producer-led projects. Colorado has also received additional SARE support through multi-state projects.

</table>
| GW22-232  | Impact of genetics and grazing management on enteric methane emissions and performance in stocker steers | $29,485      | Kim Stackhouse-Lawson Colorado State University  
Ashley Schilling Colorado State University |
| GW20-214  | Cattle as Partners in Conservation: Ecological, Economic, and Social Outcomes of Public-Private Partnerships on Colorado Landscapes | $24,727      | Dr.Stacy Lynn Colorado State University  
Anna Clare Monlezun Colorado State University |
| GW19-202  | Climate mitigation through soil carbon sequestration: increasing soil resilience and plant productivity on rangelands through compost application | $24,766      | Dr.Jennie DeMarco Western Colorado University  
Amy Honan Western Colorado University  
Alexia Cooper Western State Colorado University (doing business as Western Colorado University) |
| GW16-020  | Dryland cropping system intensification in the West-Central Great Plains: Impacts and barriers to adoption | $25,009      | Meagan Schipanski Colorado State University  
Steven Rosenzweig Colorado State University |
Information flows along the beef supply chain: Information exchange as a strategy for mitigating increased costs and maximizing producer profits.

Impacts of Reduced Nitrogen Application During Late Growing Season on Potato Tuber Quality and Profitability
